

NOTIFICATION OF SOIL REMEDIATION ACTIVITIES

304 HART STREET, WATERTOWN, WISCONSIN

Starting in early October and continuing for an estimated ten weeks, soil excavation activities will be conducted by SPX Corporation and its contractors on the parcel located at 304 Hart Street in Watertown. The excavation contractor will be mobilizing and preparing the site prior to the initiation of excavation and, following the excavation activities, will be conducting site restoration and demobilization.

During the excavation period, soils containing polychlorinated biphenyls (PCBs) will be excavated consistent with federal Toxic Substances Control Act and Wisconsin industrial direct contact soil guidelines and transported off site for disposal at appropriately permitted landfills. This excavation project is being conducted based on extensive pre-excavation soil sampling and a soil removal plan that has been reviewed and approved by the Wisconsin Department of Natural Resources and the U.S. Environmental Protection Agency.

After the soil has been removed, the excavation will be backfilled and the site surface restored. The City of Watertown will be kept informed of the status and schedule of the project activities as the project proceeds.

If you have questions regarding this project, contact Jeff Ackerman of the Wisconsin Department of Natural Resources at Jeffrey.Ackerman@wisconsin.gov or at 608-275-3323. For additional information on PCBs and environmental health, please contact Curtis Hedman of the Wisconsin Department of Health Services at Curtis.Hedman@dhs.wisconsin.gov.
